QuickStart™ incorporated a unique micro-nutrient package to ensure plants get off to a QUICK START. This package includes iron, zinc, and manganese, proven to enhance the uptake of the nutrients in the QuickStart™ formulation and in the surrounding soil.

QuickStart™ seed-applied fertilizer improves seedling emergence and even emergence.

 Faster, more even emergence
Out-compete weeds and more seeds germinate

 Larger, more vigorous seedlings
Stronger seedlings are able to withstand early stresses

 More developed root system
Better root development ensures a better lawn

QuickStart™ applied to seed offers:
- Faster, more even emergence
- Larger, more vigorous seedlings
- Longer roots and greater root mass
- Better ability to cope with early season stress
- Greater yield potential

QuickStart™ promotes early seedling growth
- Zinc, manganese, and iron are included in the QuickStart™ growing seed.
QUICKSTART™ seed-applied fertilizer improves seedling growth by providing plants small amounts of important nutrients right after germination - before the plant can easily access soil nutrients on its own. By improving early plant growth, growers see the benefit in crop establishment, early season growth and the ability to withstand challenging growing conditions.

The patented formulation and composition of QUICKSTART™ creates a “nutrient friendly zone” around the seed - enhancing the uptake of the nutrients in the QUICKSTART™ formulation and in the surrounding soil.

By mimicking the plants ability to adjust the pH in the rhizosphere, QUICKSTART™ creates an environment conducive to nutrient absorption as soon as the radicle emerges and the plant begins to grow.

RAPID GERMINATION FORMULA
